

Dear Parents,

We are aware that your child's future is one of the most important decisions you make as a family. When your child is faced with choosing a university and higher education, you naturally want that choice to be the best possible—one that opens the right doors and leads them toward a happy, fulfilling, and successful life.

If your child is still unsure about where and how to spend the next few years, allow us to help you.

Brainster Next College is the first practical higher education institution in IT in Macedonia. Our mission is clear: to provide hands-on, practical education directly aligned with the real job market, tailored to modern IT and digital trends.

We are dedicated to ensuring 100% employability of our graduates in relevant IT professions by the time they complete their studies. We achieve this through study programs built on practical learning, real-world projects for real clients, and mentorship by experienced professionals and professors from both the country and abroad. With this approach, our students are not just prepared—they are in demand even before they graduate.

Our curriculum includes professions with a rapidly growing demand, where the average salary in the industries our students build their careers in today amounts to 100,000 MKD per month. This means that the investment in education pays off within 1 to 2 years after graduation—sometimes even sooner.

Our approach is personal: small class sizes, accessible professors, a dedicated Career Center, and ongoing mentorship. Students are not left to navigate this process alone—they are guided step-by-step toward their first real work experience.

Additionally, through our “Study Now, Pay Later” initiative, your child can receive a high-quality, practical education and only begin repayments—interest-free—once they secure their first job. This means no financial burden on your family during the studies.

We improve education so your children can improve the world.

Warm regards,

Brainster Next College
